### **Explorers discover spectacular caves in Vietnam** - Yahoo! News [Skip to navigation](#)

National Geographic Howard and Deb Limbert of England led the first expedition to enter Hang Son Doong in 2009, but they were stopped a couple of miles in by a huge calcite wall. The team returned recently to climb the wall, take measurements and try to find the cavern's end.

Many photographs taken in Hang San Doong and other newly explored caves have been

published in the January issue of National Geographic and on its website, where you can view larger images. The site also has an interactive graphic of the river cave's path

### **Tourists treated to Caving 101 at Carlsbad Caverns** - Travel - Destination Travel - US and Canada - [msnbc.com](#)

The Associated Press updated 1/4/2011 11:23:26 AM ET 2011-01-04T16:23:26  
Share Print Font: +-CARLSBAD CAVERNS NATIONAL PARK, N.M. — One by one, the tourists' headlamps grow dim and disappear as they venture farther into a fracture in the limestone, deep beneath the surface of southern New Mexico's scrubby desert.

They shimmy through a narrow cave passage, ducking to keep their helmets from scraping tiny crystals overhead as they leave behind a huge subterranean chamber filled with towering columns of calcite and other worldly formations that have captivated explorers and scientists for more than a century.

This is exactly what the novice cavers signed up for — a personal tour of the underground backcountry of one of the most famous — and unique — cave systems in the world, Carlsbad Caverns National Park. For less adventurous visitors, there are paved paths, hand rails and lights in other parts of the caverns. But here, more than 800 feet down, the beauty that nature spent eons perfecting is intertwined with the challenges of negotiating slippery flow stone and squeezing from one chamber to the next through slots with names such as "The Florida Key." Slideshow: National spectacles (on this page) For ranger Mark Joop and his group of 12 amateur cavers, the excitement comes from anticipating what's around the next bend in a portion of the park called Lower Cave. "Caves are like the unknown," Joop says. "Since I can't go to the moon and explore other planets, this is the last unknown realm on the planet.

**#4**

We've gone to the highest peaks and everything, but there's so much yet to be found and explored here underground."

More than 400,000 people visit Carlsbad Caverns each year to get a glimpse of the monumental stalagmites and stalactites, delicate soda straws, translucent draperies and reflective pools that decorate the park's main attraction, the Big Room. But only a fraction of visitors get a chance to experience the more extreme tour through Lower Cave or a lantern-lit history lesson in Left Hand Tunnel.

And because of limited reservations for "off-trail" tours, even fewer people get to crawl through the Hall of the White Giant and Spider Cave, which are the most difficult — and quickly booked — of the ranger-guided caving tours.

Joop finds a spot along the narrow passage in Lower Cave where everyone can gather around. Crammed shoulder to shoulder with their headlamps blinding one another, he makes a suggestion: Turn off your lamps, your cameras and anything else that might glow. In a few seconds, darkness takes on a whole new meaning. "Try waving your hand in front of your face," he says. "Some people claim they can see their hand moving, but that's just your brain freaking out, thinking that it can actually see something. It's just too dark."

Aside from the absolute blackness, the silence inside the passage is stifling. Everyone holds their breath to see just how quiet it is. There's no dripping water, no breeze, no crickets, nothing. Actually, though, crickets have found a way to survive quietly deep inside the caverns. Rangers point them out along with horsehair worms in the drip pools when a scanning headlamp is lucky enough to spot one of the elusive creatures. There are also the mummified remains of a not-so-lucky bat along the trail and another whose tiny body was entombed in a stalagmite as it formed eons ago.

Carlsbad Caverns' discovery was something of an accident. As the story goes, teenage cowhand Jim White was mending fences just before sunset and saw what looked like a plume of smoke rising in the distance. When he got closer, he realized it was a cloud of bats pouring from the mouth of the cave for their nightly dinner run. That was around 1898. Over the next few years, White spent much of his time underground, exploring with an oil lamp fashioned from a coffee pot and homemade ladders made from fence wire and wood.

Photographs of the caverns eventually made their way into The New York Times. The federal government's General Land Office mapped the underground wonderland and the National Geographic Society followed with an expedition that put the place on the map in 1924. In 1930, Congress designated Carlsbad Caverns a national park and it later became a UNESCO World Heritage Site.

For those not up to hiking the steep paved path that winds down from the cave's natural entrance, a high-speed elevator zips down the 75 stories in less than a minute. Long before the elevator and paved walkway, cave visitors rode in huge buckets on a rope and pulley system erected by workers who mined guano (bat droppings) for use as fertilizer.

The fascination with Carlsbad Caverns comes partly from the way it was formed, a process responsible for just 5 percent of the world's caves. It started some 250 million years ago with the creation of a reef formed from the remains of sea sponges and other creatures. Then came evaporation, erosion and uplift. Rainwater seeped down while hydrogen sulfide-rich water migrated upward from the vast oil and natural gas deposits below. The resulting sulfuric acid ate away the limestone, forming the massive chambers that visitors see today. The decorations formed drop by drop over 500,000 years as calcite-rich water found its way from the surface.

"It's fantastic. It's so beautiful you just want to touch everything, but you can't," said Judy Weinberg of Toronto, Canada, after going on a two-hour tour of Left Hand Tunnel. The rangers' mantra is: Don't touch! The oil from hands and skin damages cave formations. Rangers like to point out the "cave popcorn" covering the walls, soda straws hanging in small alcoves and "cave bacon," a wavy formation that reveals muted ribbons of color when lit from behind by a flashlight.

"Can you imagine finding that big room for the first time? Coming into that gigantic, dark, open void and then seeing all of these formations? Ah, it would have been a thrill of a lifetime, like you discovered paradise underground," Joop says. With his leather gloves and cinched helmet, Joop was the picture of an old hand at underground exploration. The rest of his group, not so much. They fiddled with batteries for their headlamps and rummaged through their packs for gloves. Once the rustling stopped, Joop pulled out a knotted rope and held it up.

"This is caving 101," he said. "There are ropes, three flights of ladders, slippery surfaces and narrow passages. Does any of this scare anybody?" No way! This was why they signed up. The park has been offering adventure tours since 1995. Aside from giving tourists a chance to see parts of the cave that are normally off-limits, the tours help rangers educate visitors about just how fragile the caverns are. On a tour through Kings Palace, a ranger points to a sea of stalactites hanging just above the trail. A closer look reveals an orange dot on the broken tip of each damaged formation. A team of surveyors counted and marked more than 10,000 pieces that had been damaged over several decades of unguided tours in just a single chamber. "That's why we have limits now. There has to be a balance between preservation and access," said Marie Marek, the park's chief of interpretation. Now, volunteers regularly clean cave formations and the paved trails are vacuumed once or twice a year to keep lint and other debris from

changing the cave's environment — home to bats and other microscopic organisms. Joop hopes the tours provide a taste of excitement and mystery. "It's a world that most of us don't get to experience," he says, "and when you have an opportunity like this, it gives the normal person a chance to see what the underground world is like.

"If You Go...CARLSBAD CAVERNS:  
<http://www.nps.gov/cave/>. Click on "Fees and Reservations" to see options for ranger-guided tours. Many guided tours sell out, so reserve well in advance.

Guided tour fees, \$7-\$20; admission for self-guided tours, \$6. Located in New Mexico 300 miles from Albuquerque and 150 miles from El Paso, Texas. Open daily year-round. Through May 27, last cavern entry, 2 p.m. via cavern entrance, 3:30 p.m. via elevator. (Longer hours in summer.) The Associated Press.

## Tri-State Grotto

Meeting  
12-8-10

Bernie Wootten started the meeting at 7 pm. Thirteen people were present.

Jerry Bowen gave the treasurer's report. It was moved seconded and passed

Old Business:

We talked about the Baker gating project.

A Whittings Neck trip was talked about. A bat was seen that didn't have WNS.

A Dyers trip was talked about.

Upcoming Events:

Saturday is the Grotto Christmas party.  
January Meeting

**DEAD DOG DISPATCH**

**V. #25**

**I. #11**

**DEC**

**2010**

**#6**

Crystal Grottoes Dig the Saturday after the January Grotto Meeting.

We talked about the past Adam Stephen Dig.

In May, Jerry Bowen is still planning on go to NY caving at different caves.

Franklin Grotto wants to survey Whittings Neck Cave. They asked if it was alright with Tri-State. We said yes.

We talked about the upcoming Grotto Christmas party.

Meeting was adjourned at 8:15 pm to hold the elections.

Elections - The following people were elected:  
Chair – John Di Carlo  
V. Chair – Bob Bennett  
Treasurer – Jerry Bowen

We collected \$5.00 for Cave Bucks. It will be sent to WVCC.

We collected canned goods for a needy family. The meeting was again adjourned at 8:30 pm.

Tri-State Grotto

# TRIP REPORTS

## BEETHOVENS SYMPHONY

July 25, 2010 survey trip

Back in July, Brent Jefferson contacted me about a ‘new’ cave in Hardy Co. He said that a person living locally showed him where the cave was. It was supposed to have a 15-20 foot drop and

contained big eared bats. I started contacting people to survey this ‘new’ cave.

On July 25, we all arrived at the meeting place in Hardy Co. Those attending the survey trip were: Brent Jefferson, Brad Jefferson, Jerry Bowen, Nikki Fox, Chris Coates, Jeff Jahn, Terry McClanathan, & myself. Bob Denton was to have made the trip so we could study the geology but he could not make it.

The weather was very hot (mid 90’s)! The hike to the cave was up an old road to the top of the ridge. The cave was just over the top in a shallow sinkhole. There were also several other sinks scattered nearby across the top of the ridge.

Entrance (Bob Bennett)

Chris rappelling (Nikki Fox)

Chris rigged the rope and one by one we rappelled in. The drop was about 17 feet to the floor of a talus pile. Looking at the wall & up to the entrance hole the passage traveled off in 2 directions to the left and right. We split into 2 survey groups. The first survey team consisted of Jeff (fore sights), Chris (back sights), and Terry (Sketcher). The second survey team consisted of Nikki (sketcher), Bob (fore sights), & Jerry (back sights). Jerry, Brad & Brent took turns with the dummy end of the tape.

The first group started surveying to the left as our group prepared to survey the right-hand passage. This was Jerry's first actual survey trip where he used the compass so we were a little slower while teaching him the basics.

The right-hand passage continued with a 20 foot high ceiling for about 150 feet. It also dropped downward at about 40 to 45 degrees. The rocks and moist earth talus was very slippery. As we approached the bottom of the passage the floor dropped immediately dropped about 10 feet over a very large boulder and continued. There was also a passage going to the left in an upward direction for about 30 feet and connected through a body-sized window to the entrance room just below the entrance pit.

Once down the 10 foot drop the passage continued down to the lowest point in the cave at about 80' below the entrance. Here there was a flowstone lined chimney that went straight up for about 30+ feet (later Chris tried to chimney the pit with no success) (He also thought there might be a passage at the top).

As we were surveying, team one was surveying the left-hand passage. The passage soon came to a small narrow passage about 6 feet up on the wall. Once through this passage the floor dropped down a narrow pit for 15' and continued to a room 12 feet high. There was also a short passage to the right leading down to another room about 10 feet high with a too tight passage

leading on. Another passage lead down over an 8 foot climb to more passage.

The passage continued as a 10 to 15 foot high and 5-15 feet wide passage for about 100 feet to another climb down. This lead to the lowest point in the left-hand passage at about 63 feet below the entrance. At the lowest point there were some calcified roots and a few 'old' formations. Here was also a too small passage leading down and on.

Survey team #1 had about 300+ feet of survey while survey team #2 had between 180 and 200 feet giving the total of about 509 feet of horizontal survey. The total depth was 83 feet. Terry McClanathan did the cartography.

We did not see any bats or salamanders but we did see plenty of different types of flies. There was much decaying matter at the bottom of the entrance drop

Of course the cave has always been known about by locals but several times groups of cavers have tried to locate the cave with no success.

Jerry rappelling (Bob)

Nikki rappelling (Bob)

Brad rappelling (Bob)

Brent waiting his turn (Bob)

The entrance from the inside (Nikki)

Subject: (FRG) - B&C Wunderwear Now in Virginia

Everyone,

If you didn't know, Cecile James has moved to Lynchburg!

The following is from her new website.

Trouble in Wunderland: The May 2010 flood in Nashville almost completely wiped out B&C Wunderwear. We were able to recover some stock and supplies, and are slowly getting our sewing machines running again. Many thanks to many cavers who have helped us – we are very grateful. We have now relocated to Lynchburg, Va. We are still getting things set up and have run into both phone and ISP problems along the way. Things are slowly coming together. You can contact us at (434-528-2303) or [Cecile@bcwunderwear.com](mailto:Cecile@bcwunderwear.com).
